Department of Genetics  
University of Wisconsin  
Madison, Wisconsin

Dear D. Lederberg:

Thanks for the introductory outline of your biochemical genetics course. I have been unable to find any reference to the alkali-hydrolyzed ribonucleic acid. I presume there is a method recorded in the literature for its hydrolysis or it can be obtained in the market. Information on your source of procurement, or its method of preparation, would be greatly appreciated.

Very truly yours,

*John P. Hollis*
